

Single Button Alerts

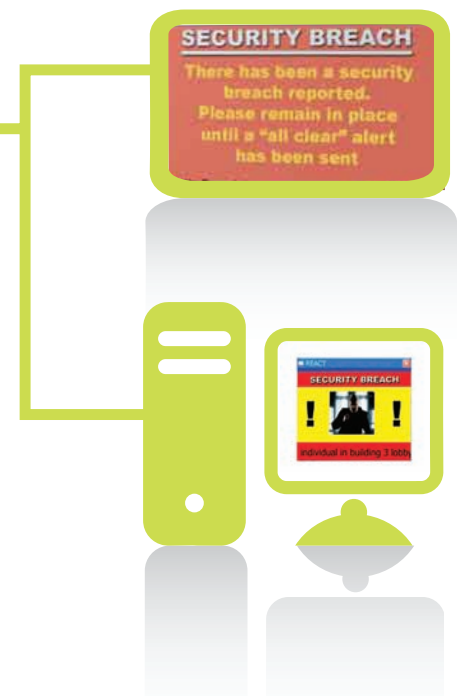

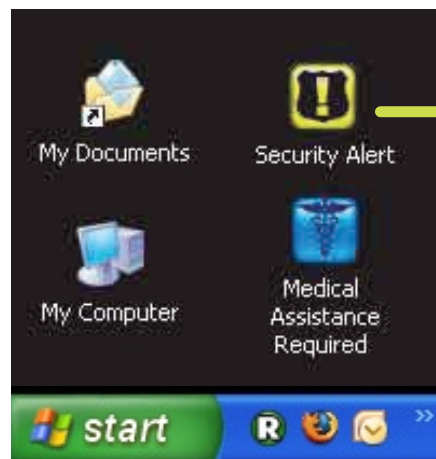

Features

Multiple SBA buttons can be installed on a single system to request different levels of assistance, and allow responders to know “what’s behind the door”.

- Unknown Intruder Alert
- Belligerent Student or Employee
- Impending Violence
- Suspicious Package
- Medical Emergency
- Fire or Flooding

Panic Button Solutions

The Single Button Alert (SBA) is a unique component of the REACT System that provides the ability to click a desktop icon and immediately trigger a location-specific alert to pre-defined groups or individuals. REACT Single Button Alerts (SBA) provide an easy to install, and easy to customize panic button solution on any desktop in an organization.

Tailored Messages

The SBA launch may be tailored to contain specific location information. For example, if a teacher in Classroom 20 launches an alert, the appropriate security and administrative staff will immediately be notified of the request for assistance in Classroom 20. The user launching the alert doesn't need to take the time to enter this information, it is already pre-configured.

Low Cost

Because REACT Single Button Alerts use existing networked desktop systems, panic buttons can be permanently deployed to high visibility areas, or deployed as a temporary measure in developing situations where an employee may have an expectation of risk from workplace or domestic violence. REACT SBAs are smart alternative to costly, slow to deploy, hardware.
